## About This Content

One of Germany's most modern diesel multiple units speeds into Train Simulator, with the ICE TD joining the popular ICE fleet.

Following the successful introduction of the Intercity-Express system across Germany in the early 1990s, Deutsche Bahn started plans to upgrade long distance services with higher speeds and raise comfort levels for passengers, and to replace locomotive-hauled regional services.

These developments resulted in three new ICE trains being built – the ICE 3, ICE T and ICE VT, the latter 'VT' standing for Verbrennungstriebwagen (internal combustion motor car). All three trains were developed alongside each other and shared common components and layout – noticeable differences on the ICE VT were its crescent-shaped bogie supports and the removal of pantographs.

The ICE VT – later to be more commonly known as the ICE TD – was built by a Bombardier and Siemens consortium, and a four-car configuration chosen, without a restaurant car. The first trainset was assembled in 1998 and in 2001, all 20 units were commissioned for Deutsche Bahn and today operate on many electrified lines in Germany, despite being diesel powered.

The BR 605 ICE TD for Train Simulator is available in Deutsche Bahn livery and features PZB and LZB signalling, SIFA and AFB driver vigilance devices, a tilting mechanism and passenger view.

The locomotive is also Quick Drive compatible, giving you the freedom to drive the DB BR 605 ICE TD on any Quick Drive enabled route for Train Simulator, such as those available through Steam. Also included are scenarios specifically for the

---

[Hamburg-Hanover](#) route (available separately and required to play these scenarios).

## Scenarios

Three scenarios for the Hamburg-Hanover route:

- Berlin to Hamburg via Uelzen
- Football Relief Service
- Hamburg to Berlin via Uelzen

More scenarios are available on Steam Workshop online and in-game. Train Simulator's Steam Workshop scenarios are free and easy to download, adding many more hours of exciting gameplay. With scenarios being added daily, why don't you check it out now!

Title: Train Simulator: DB BR 605 ICE TD Add-On

Genre: Simulation

Developer:

Dovetail Games

Publisher:

Dovetail Games - Trains

Franchise:

Train Simulator

Release Date: 30 Jan, 2015

b4d347fde0

**Minimum:**

**OS:**Windows® Vista / 7 / 8

**Processor:**Processor: 2.8 GHz Core 2 Duo (3.2 GHz Core 2 Duo recommended), AMD Athlon MP (multiprocessor variant or comparable processors)

**Memory:**2 GB RAM

**Graphics:**512 MB with Pixel Shader 3.0 (AGP PCIe only)

**DirectX®:**9.0c

**Hard Drive:**6 GB HD space

**Sound:**Direct X 9.0c compatible

**Other Requirements:**Broadband Internet connection

**Additional:**Quicktime Player is required for playing the videos

English,French,German

---

LZB distance indicator is often off by several hundred meters, which is the kind of thing that should be noticed during any kind of basic QA.. very nice and easy to drive. Very good, but the counter of scenarios stops at 1 and not at 6. I ride this train very often, and it is very accurate the sounds are a bit off but not massive overall a good dlc!. Very nice add on, sounds could be better but OK. Overall recommended. It also includes some scenarios for the Hamburg-L\u00fcbbeck route. For a diesel train the acceleration is amazing. 0-100km/h must be only about 50 seconds. The tilt is well modelled and a speed you feel akin to a motorcyclist leaning into the bends to keep speed up. The interiors match published seating plans well, with well modelled leather seats in first class and the semi-compartments (or coupe\u00e9s) included. The cruise control is a bit jumpy compared to the ICE T and no visible indication is given of the selected cruise speed. Otherwise, driving characteristics are good, with braking smooth and easily controllable. The ICE TD is similar to the Class 221 Super Voyagers in the UK only better. The interiors are bright and airy compared to the Super Voyagers tin can feel. Braking is far better too. Overall I would say that for the modern day Deutsche Bahn enthusiast this would be an ideal buy, for others I would simply say this is what a Super Voyager should be like - nippy on the acceleration, good on the brakes and with a comfortable interior which UK Class 221 passengers could only hope to dream of.. pretty good add-on, the interior cabin view doesn't work for me though. well made! the only thing it needs is a danish state railway logo version (with the DSB logo at front and doors)
